

Matías Jaque Montecinos

Full-Stack Engineer | React | Node.js

Teléfono: +56 9 4737 0877 | Correo: matias.jaque.dev@gmail.com

Professional Summary

Computer Engineering graduate with 3 years of experience building full-stack web applications end-to-end. I autonomously lead the development and maintenance of a SaaS platform, taking full ownership of architecture decisions and shipping new features. Highly skilled in React.js on the front-end, with solid experience in Node.js on the back-end. I thrive in high-trust, async environments where I can own outcomes, ship fast, and solve complex performance and data-modeling problems.

Key Achievements

- **Performance Optimization:** Reduced critical page load time from 14 seconds to 5 seconds (60% improvement) on a SaaS platform after scaling from 500 to 13,000 inventory records, ensuring the system could handle production data volumes without collapsing.
- **Product Development:** Designed and built a digital vehicle checklist module from scratch, automating work-order generation and traffic-light failure logic; deployed successfully for 45 active clients.

Professional Experience

Full-Stack Developer | MaintData

Aug 2024 – Present

- Autonomously led development of new modules and continuous improvement of a SaaS inventory and stock platform, making all technical and architectural decisions without direct supervision.
- Refactored legacy code and improved modular front-end architecture using Vue.js and Redux, ensuring maintainability and scalability.
- Integrated HTTP functions with Firebase and consumed Firestore non-relational databases; implemented Redux for state management, separating business logic from presentation.
- Designed and built a bulk data upload module supporting 15+ Excel file types, eliminating manual data entry and drastically reducing client operational hours.
- Reviewed code daily to ensure quality and maintainability, including code generated by AI tools, and applied best practices such as Smart/Dumb component separation and custom hooks.

Analyst Developer | Universidad de Santiago de Chile (USACH)

Jul 2023 – Aug 2024

- Designed and developed a module using Laravel and Oracle for managing faculty teaching hours.
- Implemented a two-factor authentication (2FA) system with Java, successfully integrating it with existing institutional systems.
- Participated in migrating legacy software to the web, using Vue.js for the front-end and Go for the back-end.

Education

Ingeniería en Ejecución en Informática | Universidad de Santiago de Chile

2022

Technical Skills

- **Front-End:** React.js, Vue.js, Next.js, JavaScript, TypeScript, Redux, Tailwind CSS, Bootstrap, Material-UI, Axios
- **Back-End & Databases:** Node.js, Laravel, Java, Go, MySQL, Firestore (Firebase), Oracle
- **Practices:** REST APIs, Git/GitHub, Code Review, Clean Architecture, Component Architecture
